ONTIC

Protective Intelligence Platform for the Federal Government

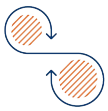

Federal government security teams face a growing volume and complexity of threats to their mission, both known and unknown. These threats, targeting high-value assets, range from external threats aimed at high-ranking officials or points of interest to internal threats with malicious intent. Effectively ensuring protection requires significant time and expertise—challenges compounded by reliance on outdated and inefficient systems.

Ontic empowers federal security teams with the protective intelligence needed to streamline their operations. Our platform helps uncover new threats, research and build cases around them, connect and assess POIs, triage incidents faster to uncover critical insights, standardize detailed reporting, and modernize security programs.

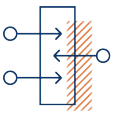

Secure, purpose-built POI database with connections to all your sources

The Ontic Platform is built to empower your analysts, investigators, and security personnel with the data they need. It integrates public data, security systems, social media monitoring, dark web listening, geospatial risk mapping, and customizable threat assessments—offering a consolidated view of high-value assets and potential risks. By unifying information across departments, it creates a single source of truth enabling teams to take critical action when it matters most.

Integrated data for actionable insights

With the data on your high-value assets and known threats consolidated, your team will be able to provide meaningful insights to field-based security teams as they work to protect their people and mission. In the ever-evolving landscape of potential threats, Ontic provides the ability to search, identify, investigate, and take action on new threats.

Streamlined case management

The Ontic Platform features purpose-built, customizable workflows that enable teams to investigate and take needed action in safeguarding high-value assets. New or emerging threats can be quickly identified, assessed, and investigated, with continuous monitoring and real-time alerting to ensure proactive protection.

Operate with confidence

AICPA SOC 2 · HIPAA HITECH · GDPR · CCPA · STAR LEVEL ONE

FedRAMP Status

Ontic is progressing through the Federal Risk and Authorization Management Program (FedRAMP) process.
